

Auto Scaling Groups

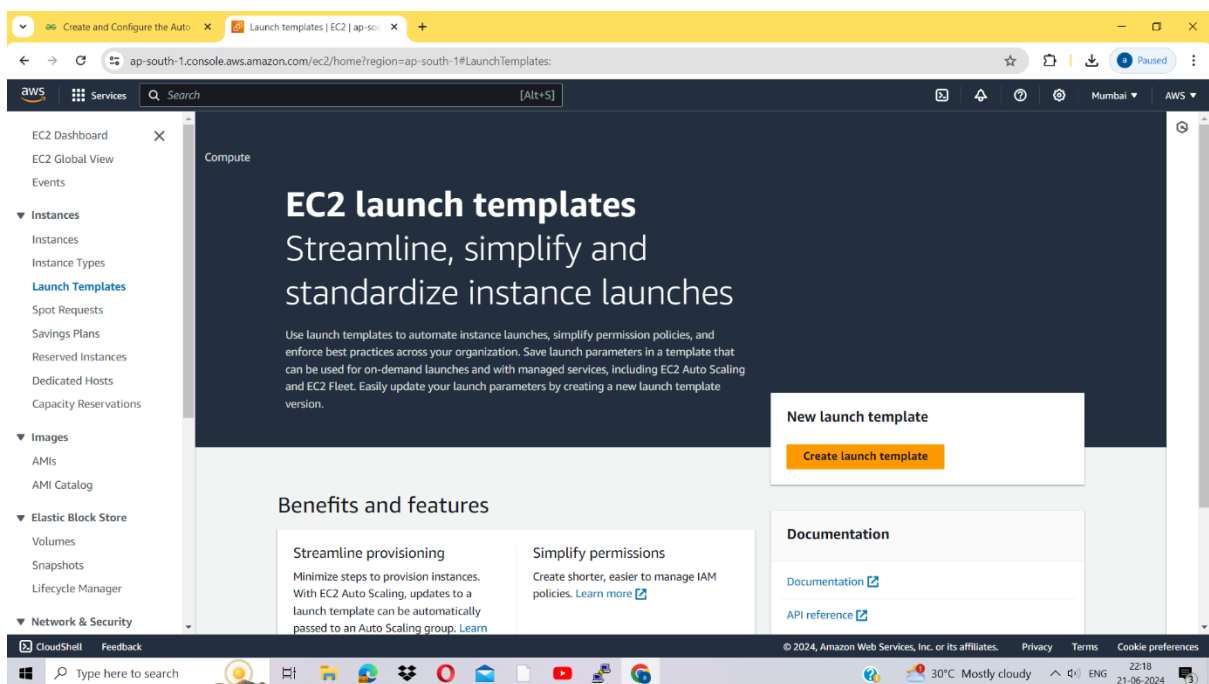

Name: Vempalli Rizwana

Rollno: 21HM1A05G0

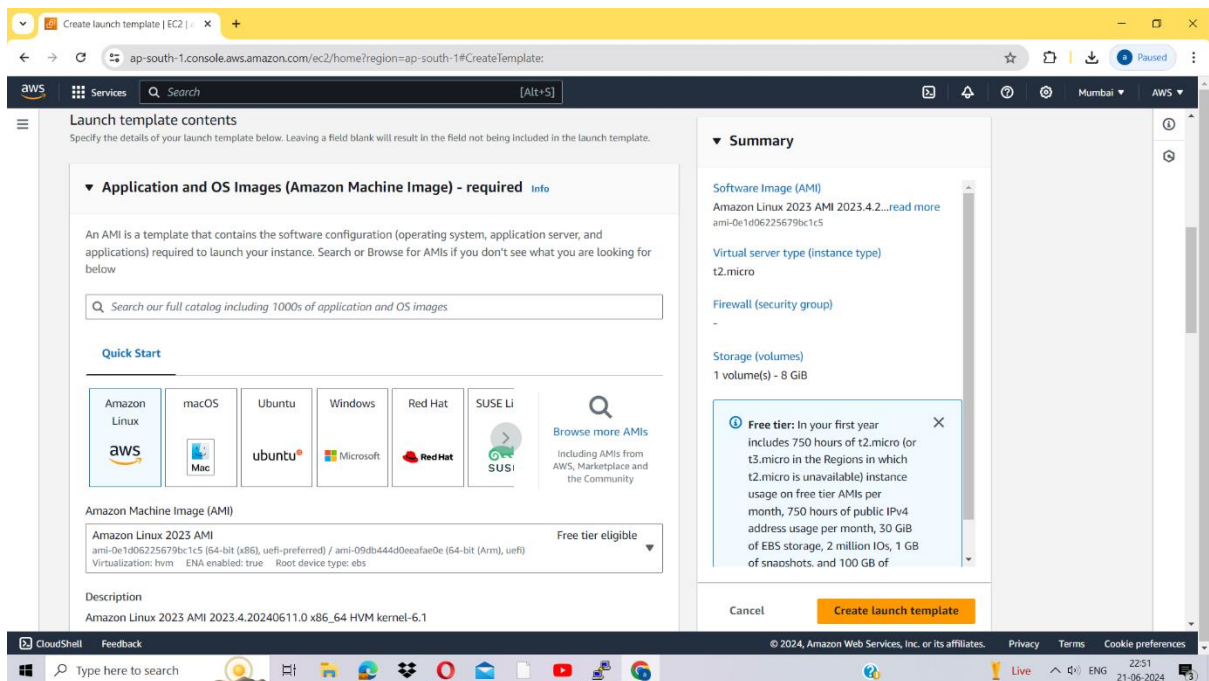

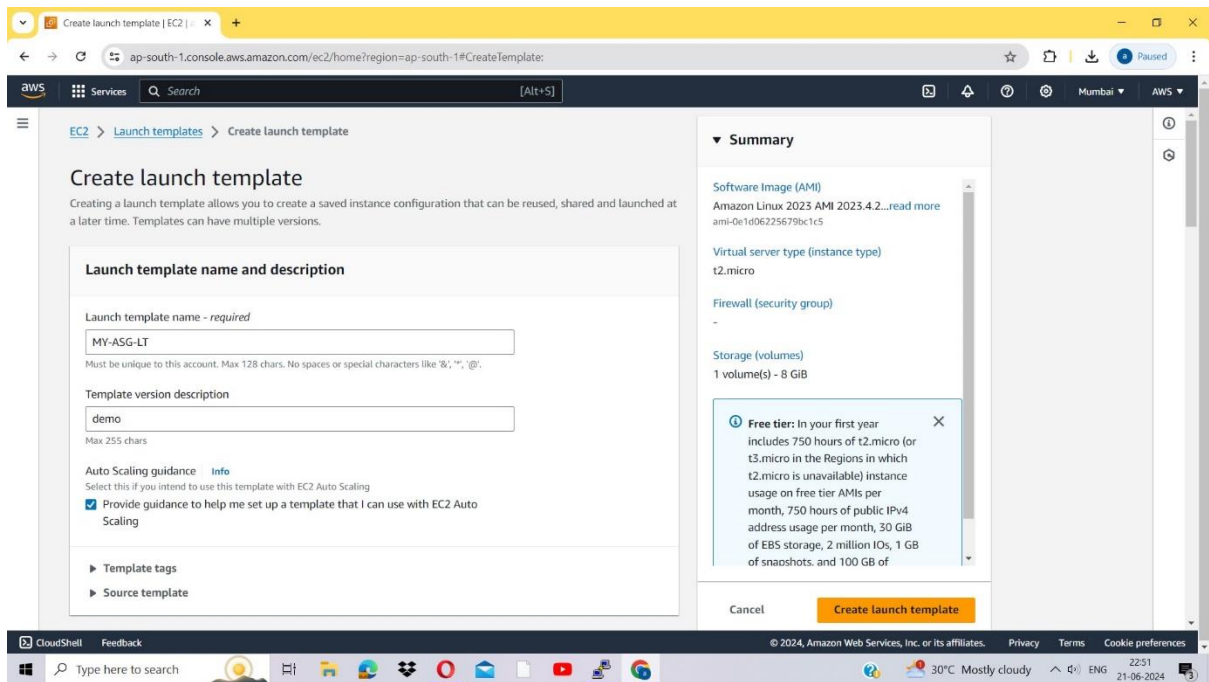

Email id: rrizzu139@gmail.com

Steps To create Auto Scaling Launch Template

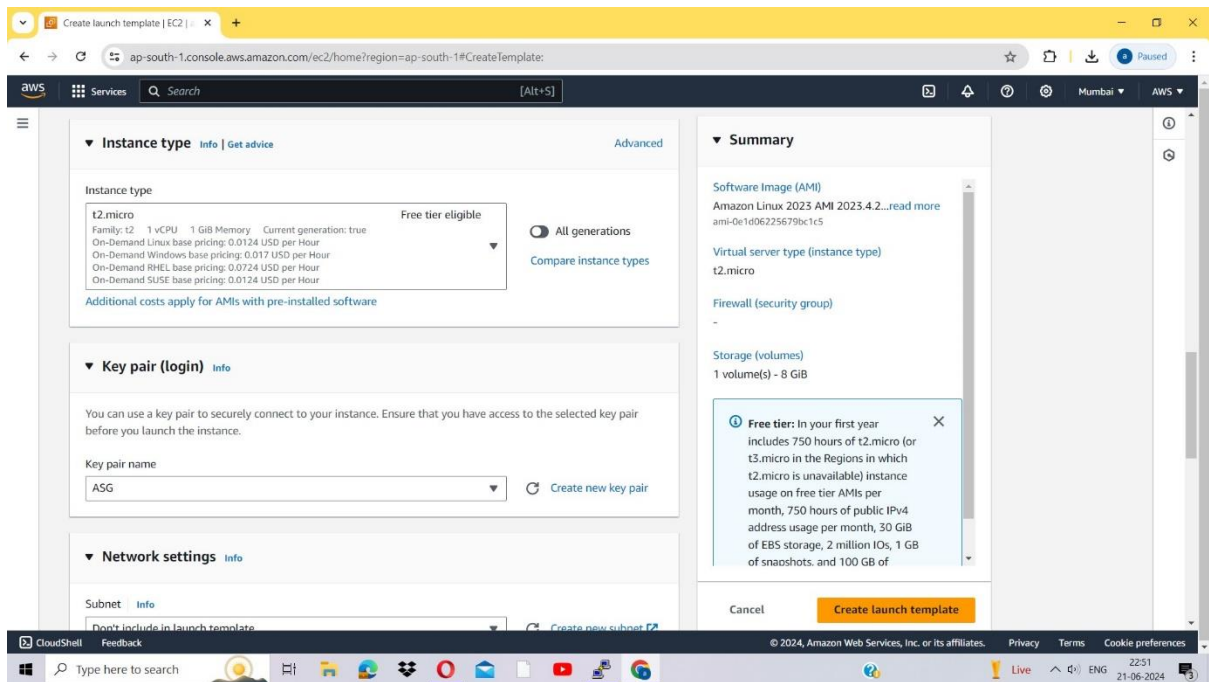

- Click on the All Services.
- Click on the EC2

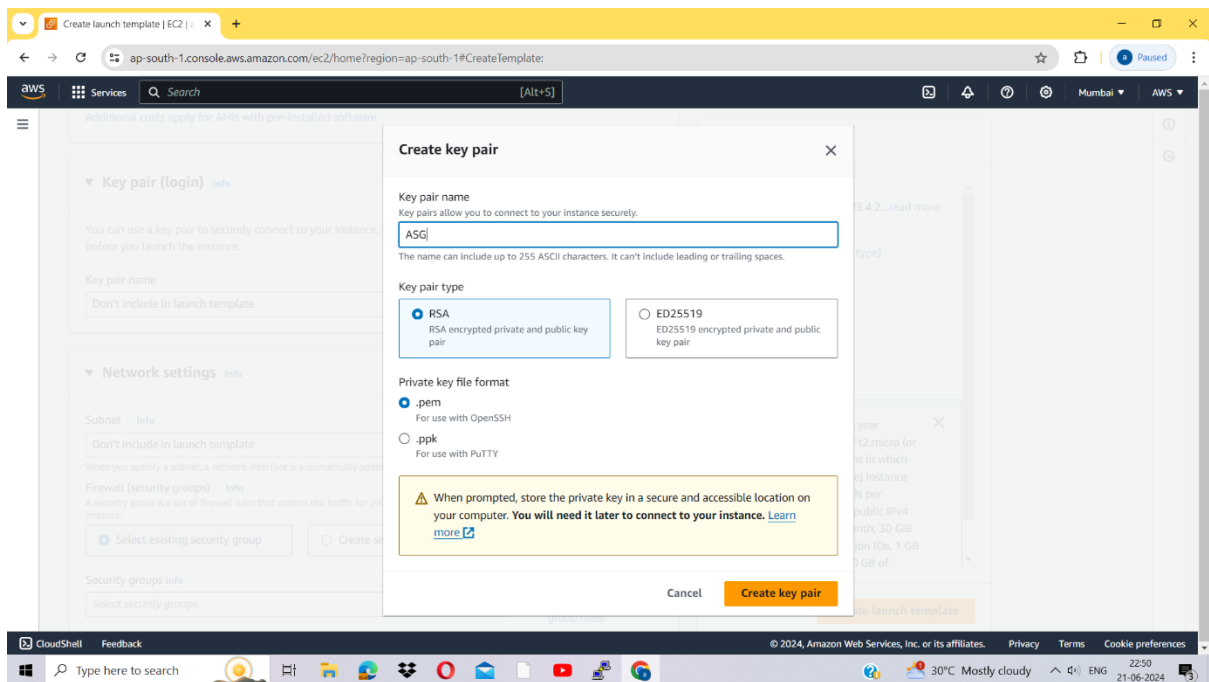

- Scroll Down and click on the **Launch Templates** and click on the **Create launch template**
- Type the **Template name**

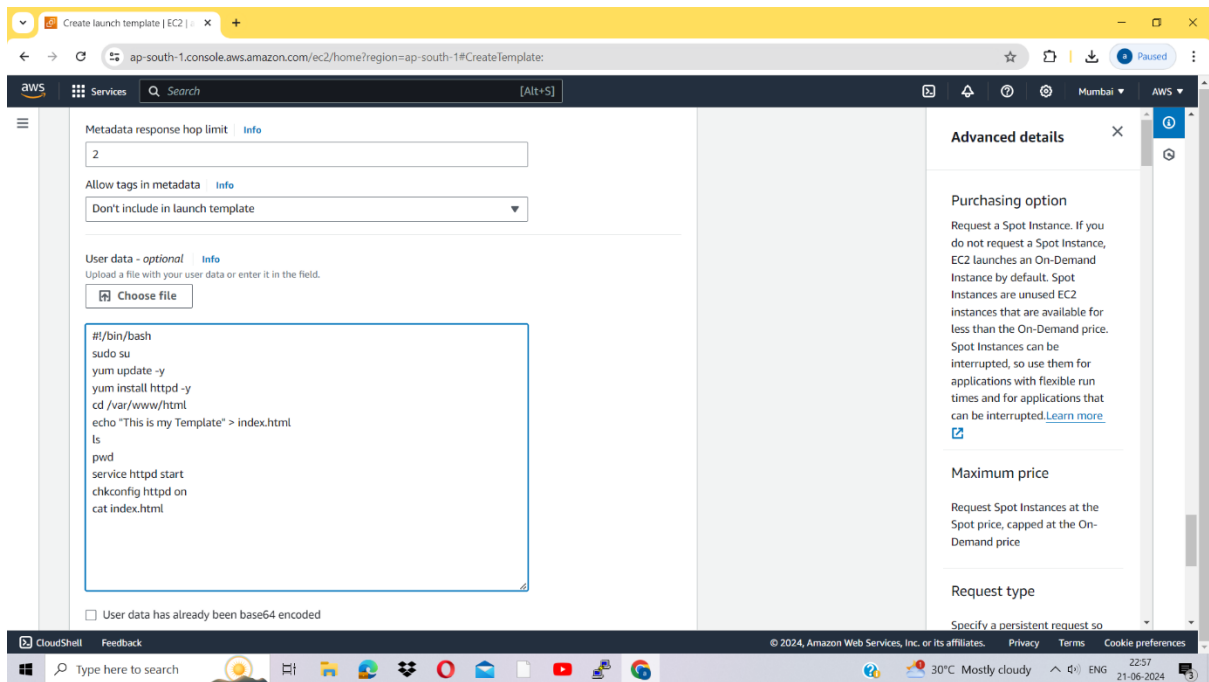

- Select the **Instance Type** and **Key pair**

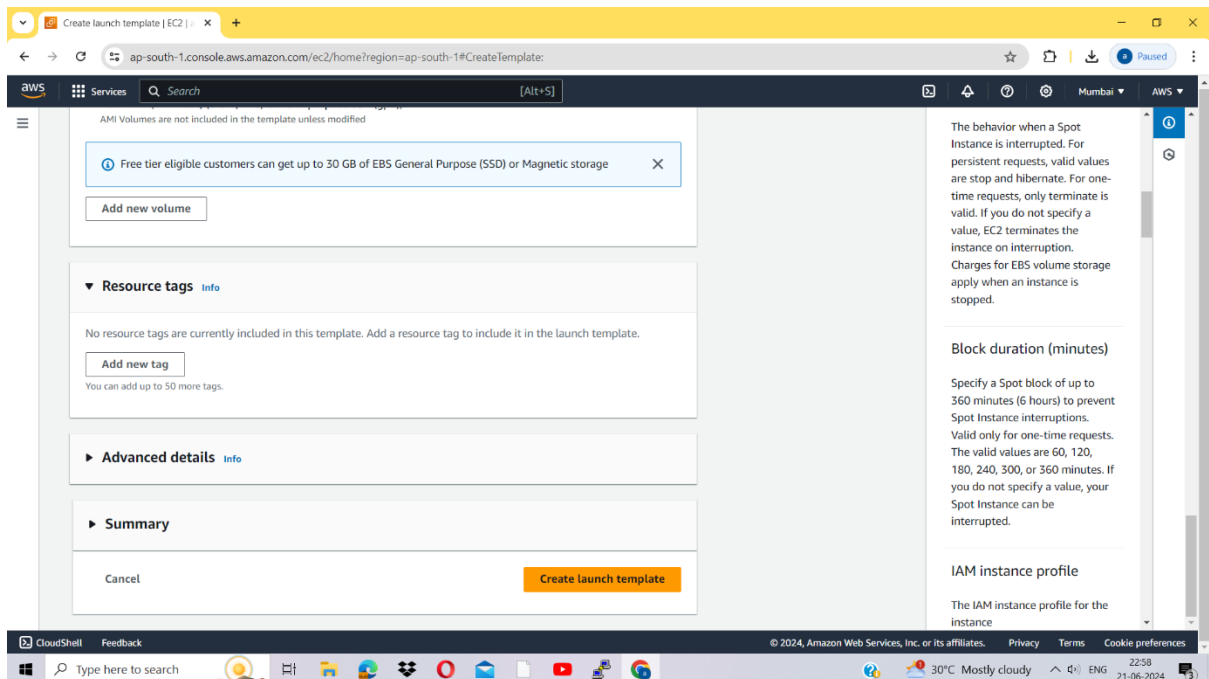

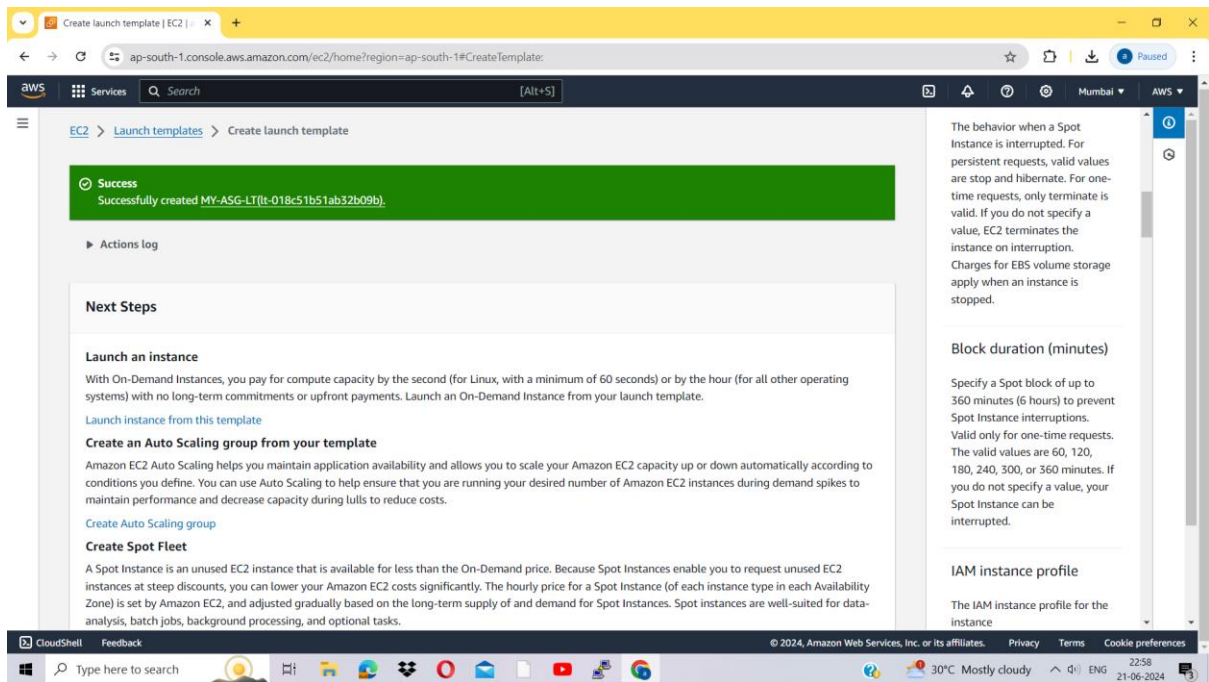

- Create a new key pair named ASG

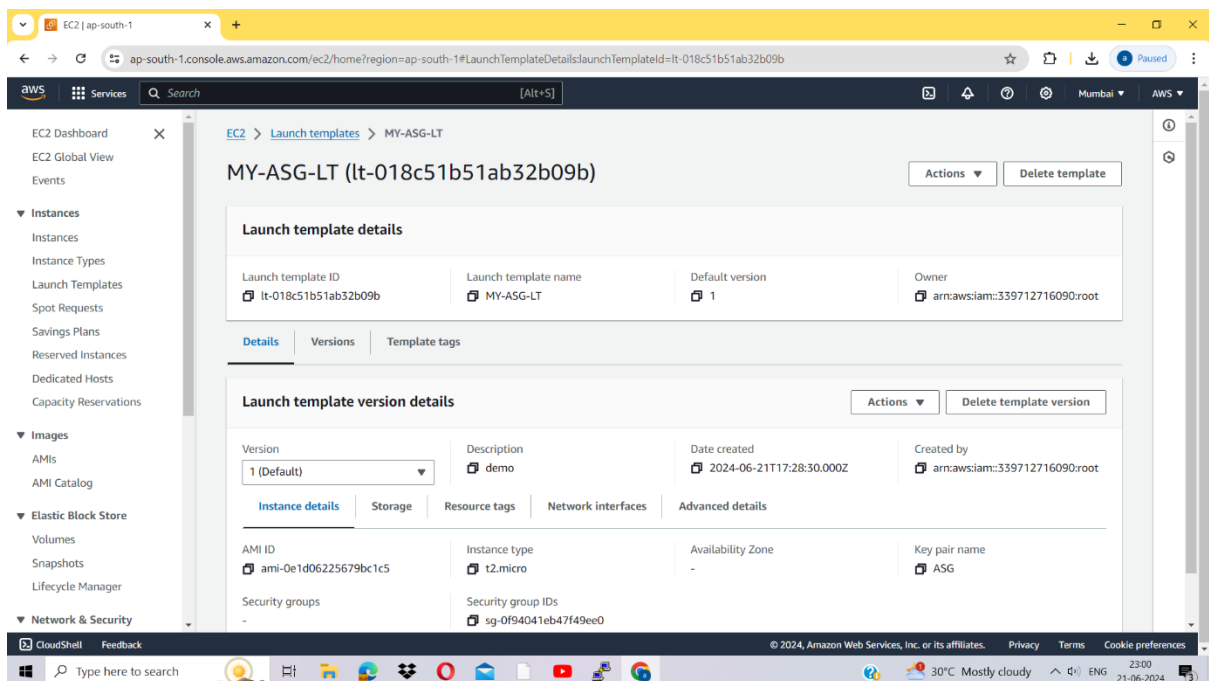

- Click on the **Create Launch Template**.

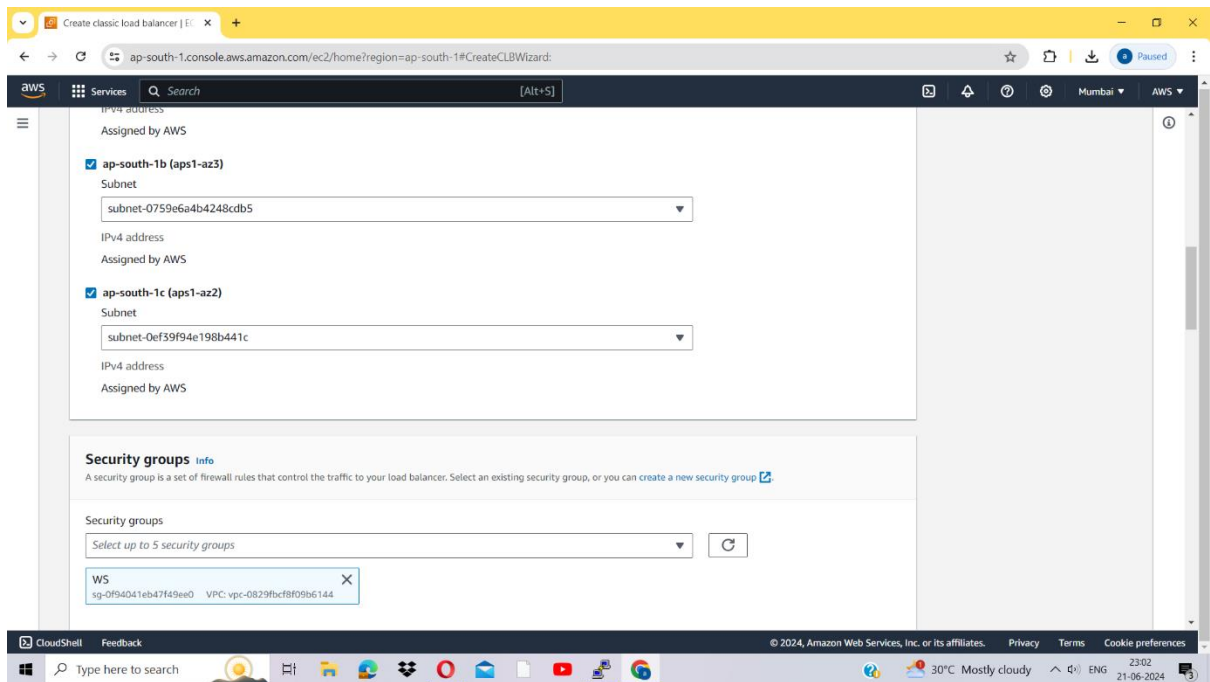

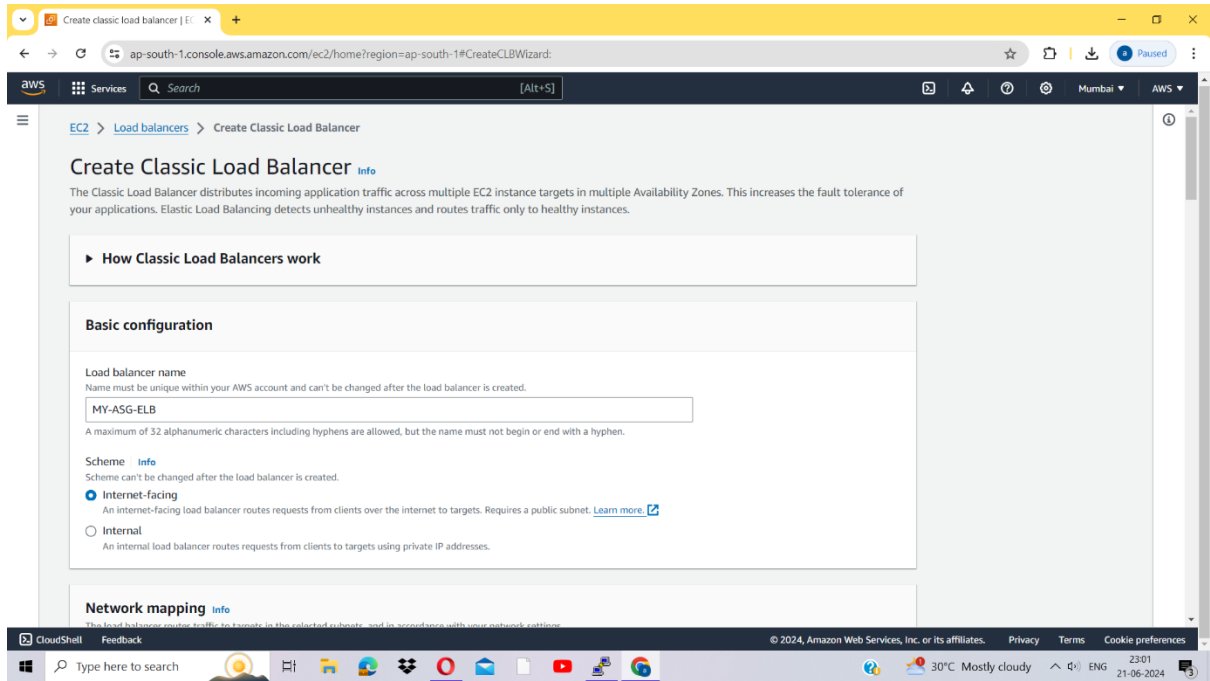

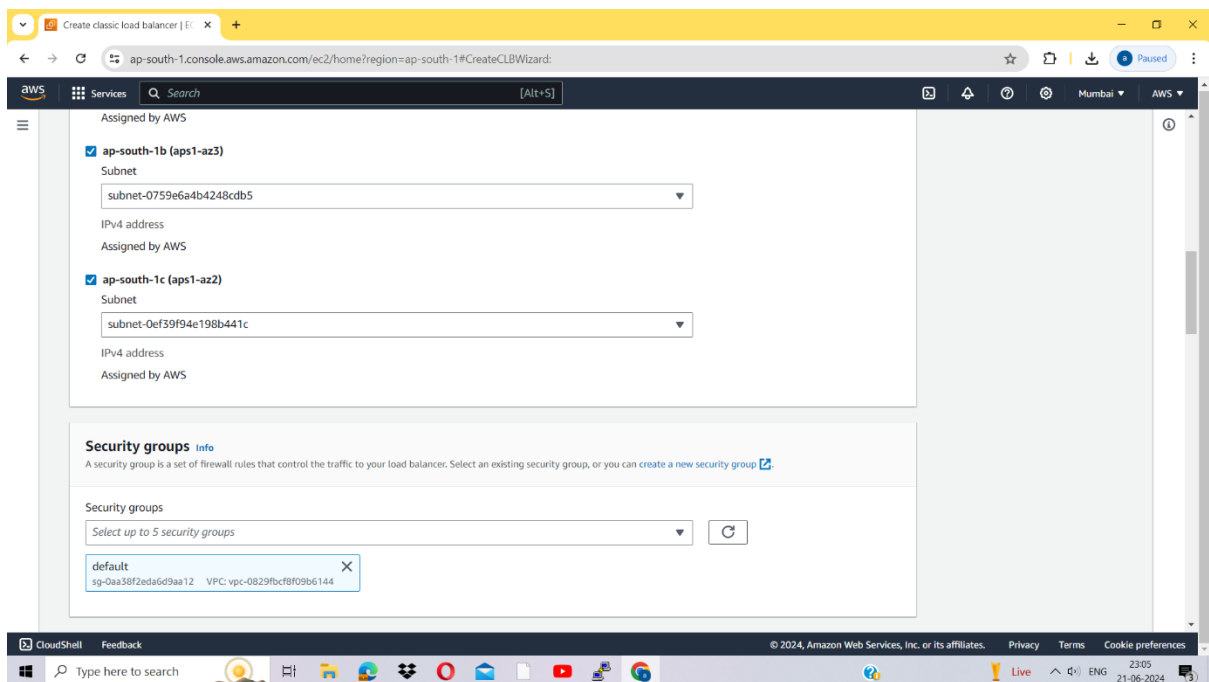

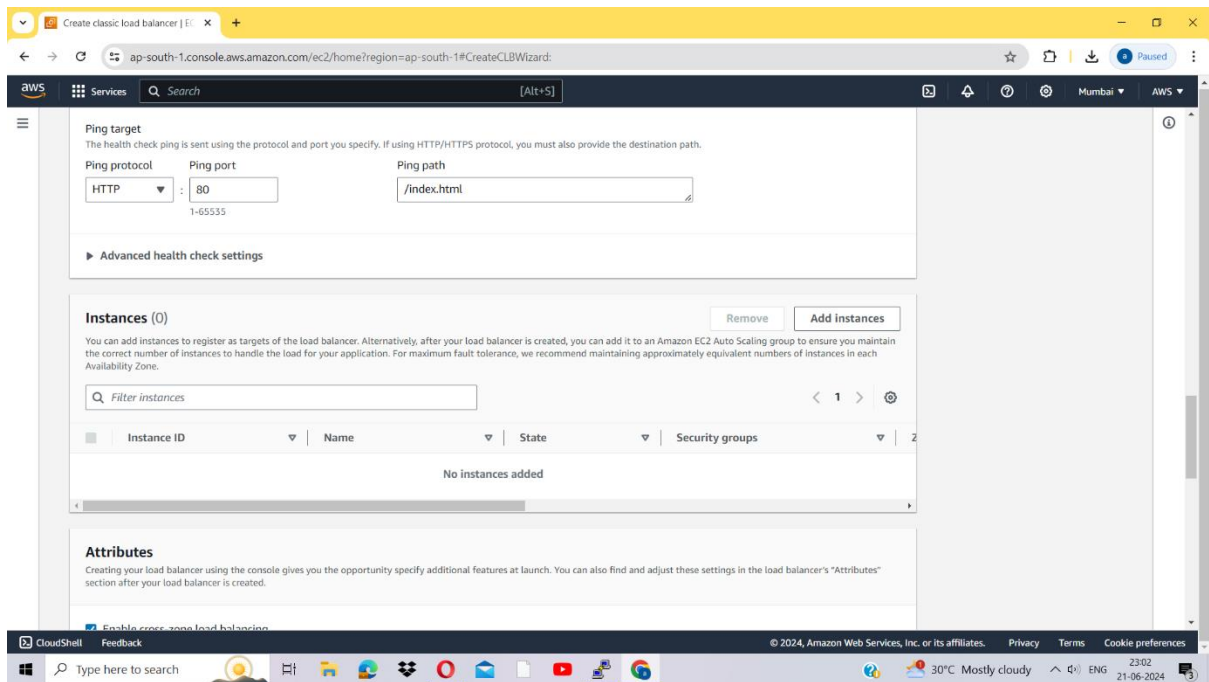

- Now you can see the template is **created**. Now, scroll down and click on the **Auto Scaling Groups**.

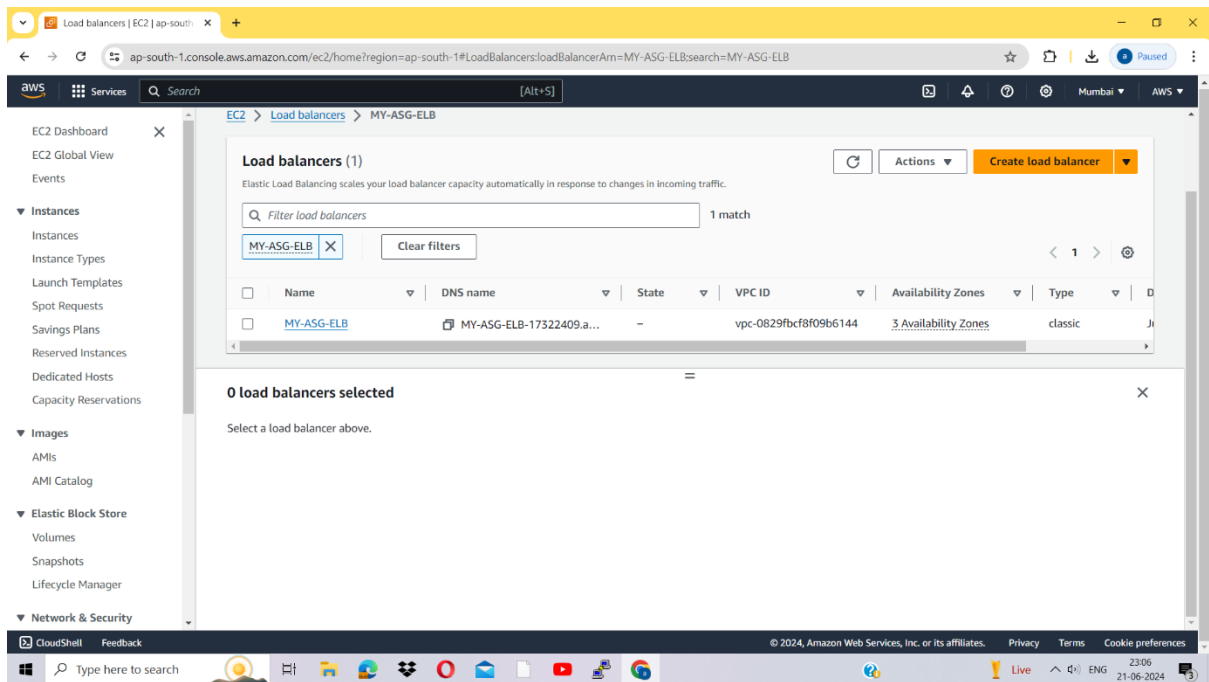

- Now click on load balancers
- And Create a classic load balancer
- Name it as MY-ASG-ELB

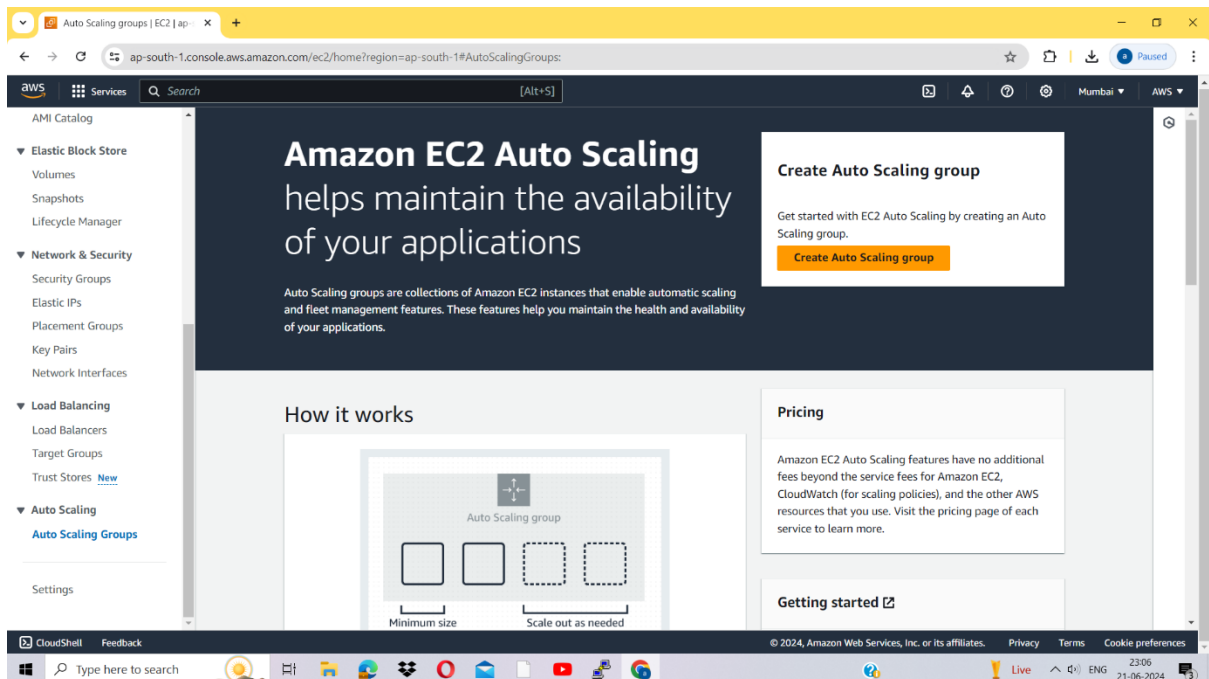

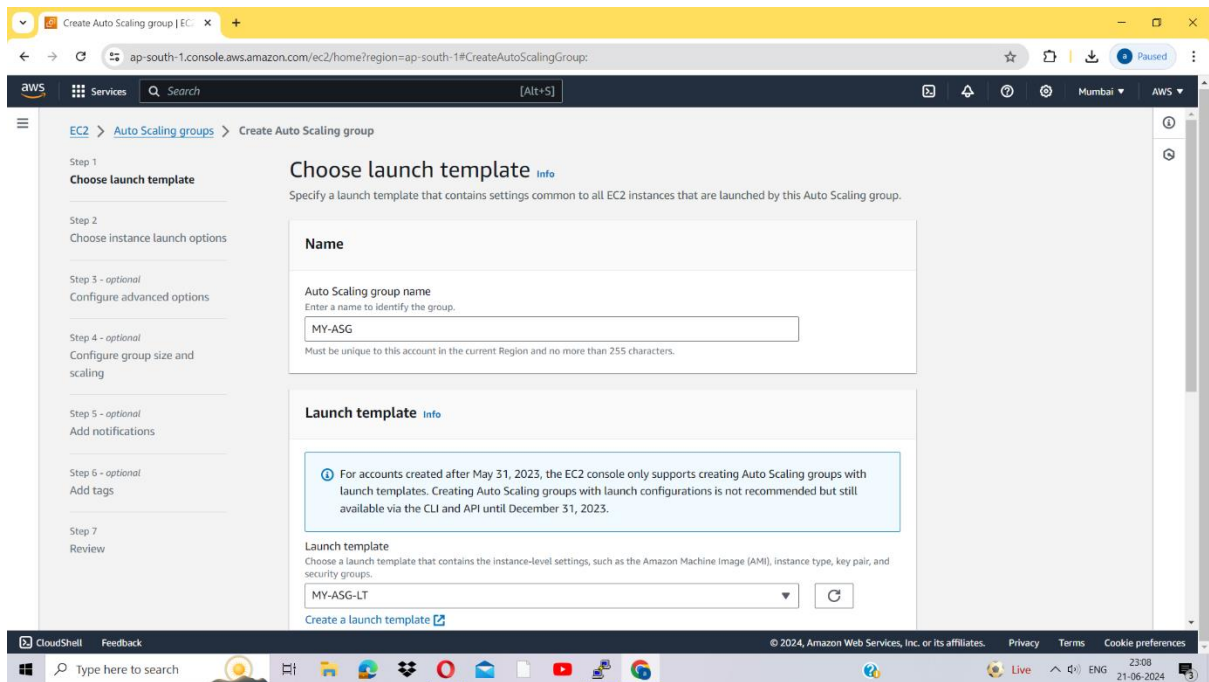

- A Classic load balancer is Created Successfully

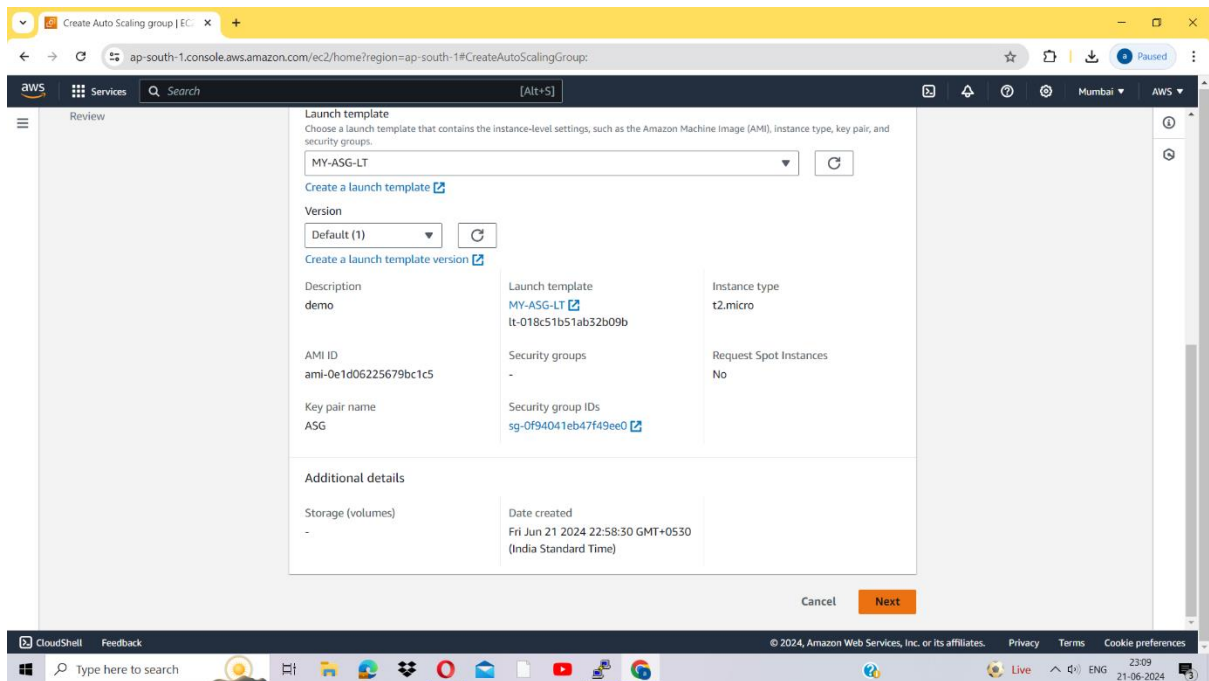

- Click on the **Create Auto Scaling group**.

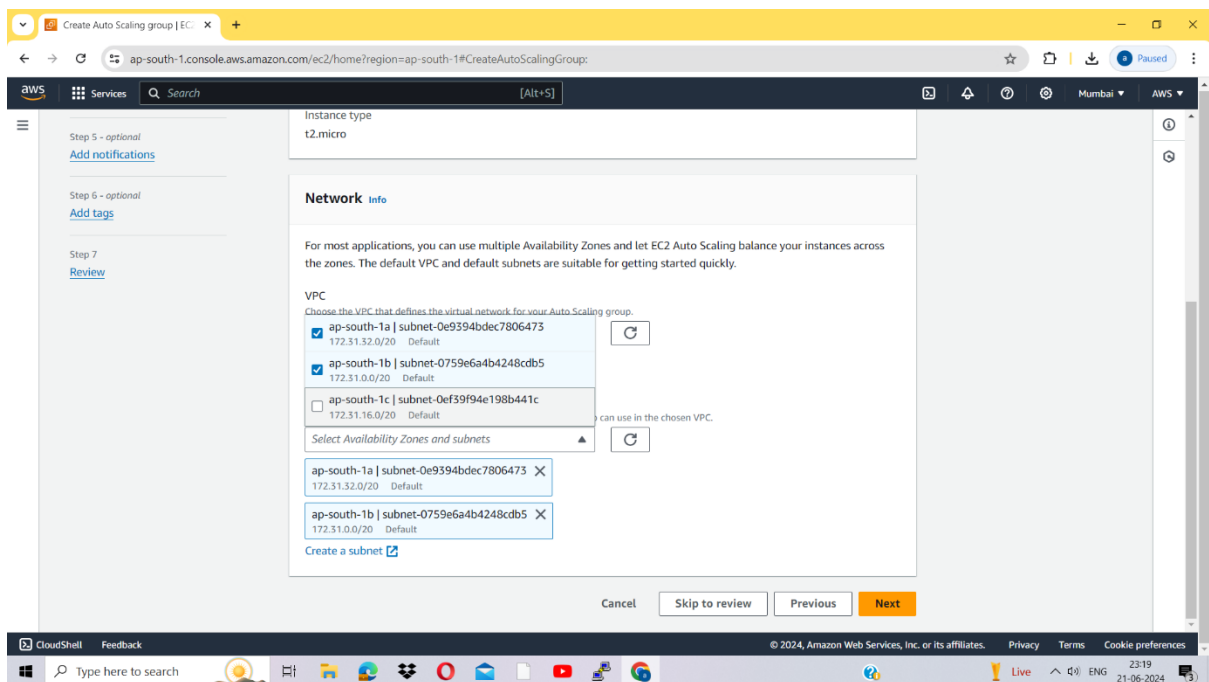

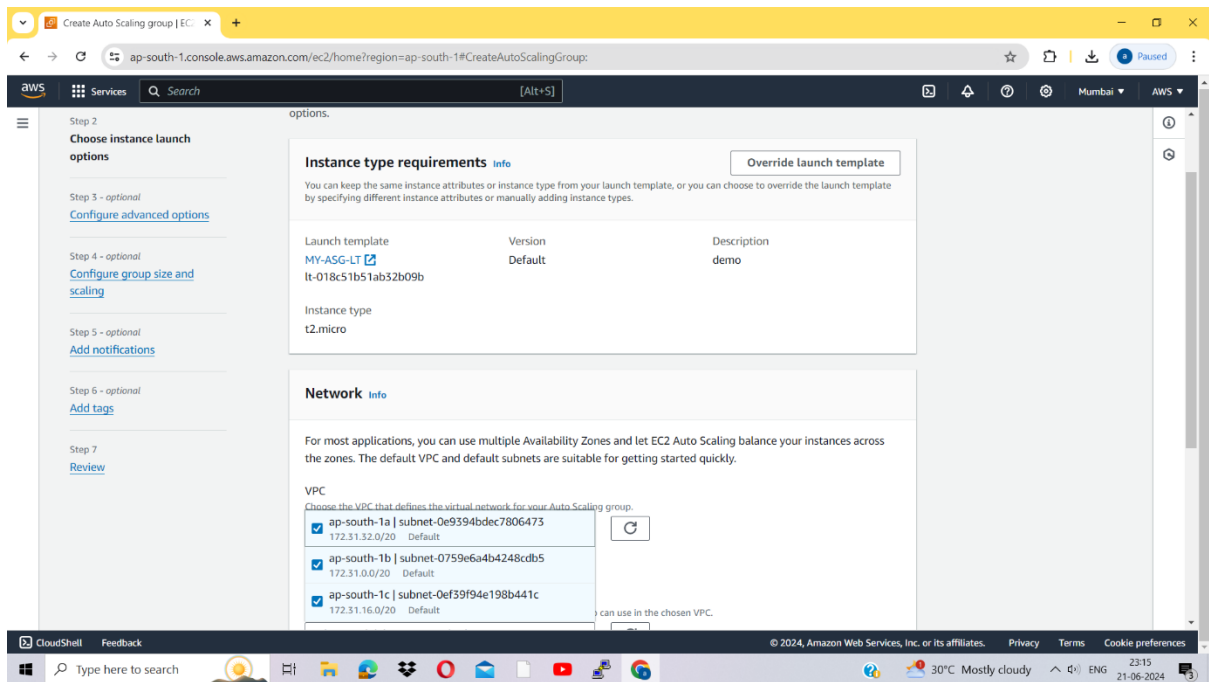

- Type the **Auto Scaling group name**.

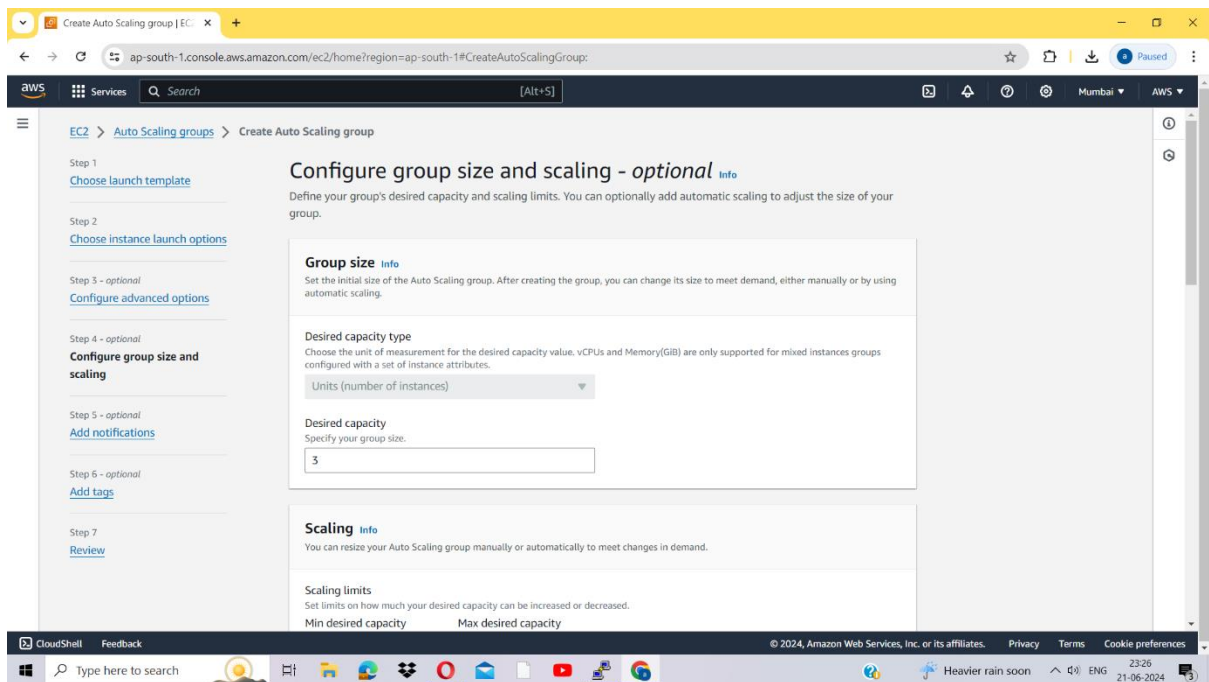

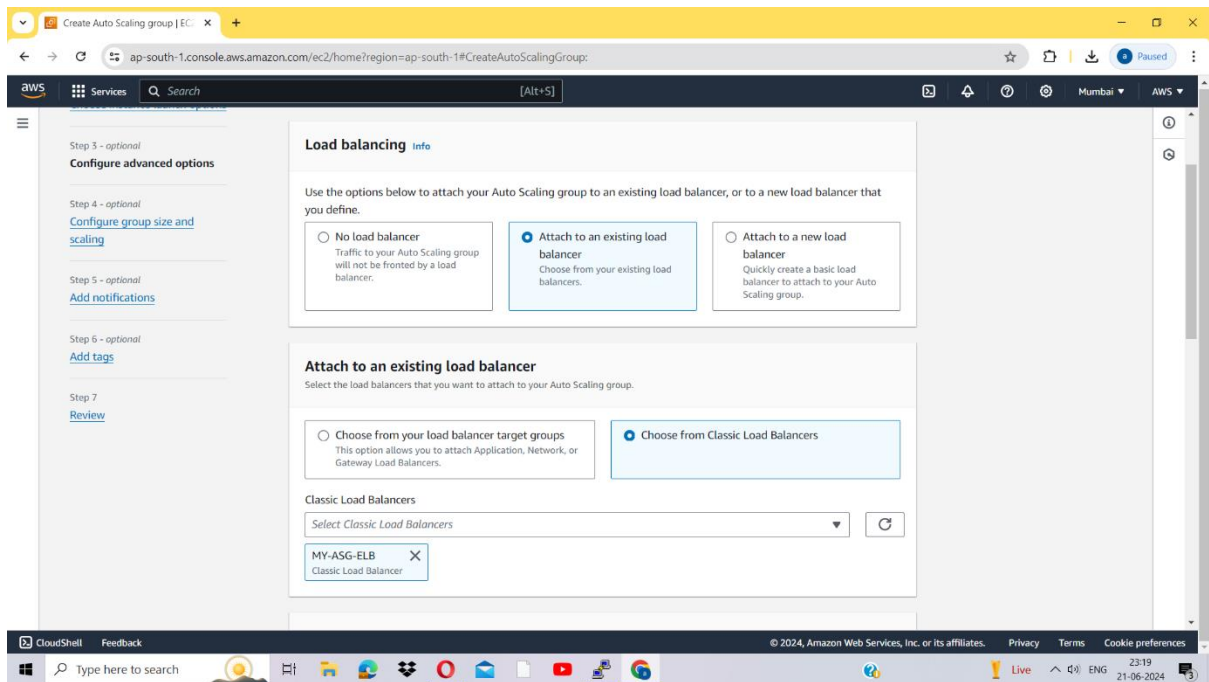

- Select your **Template**.

- Select the **VPC** or go with the default VPC and also select the **Availability zone**.

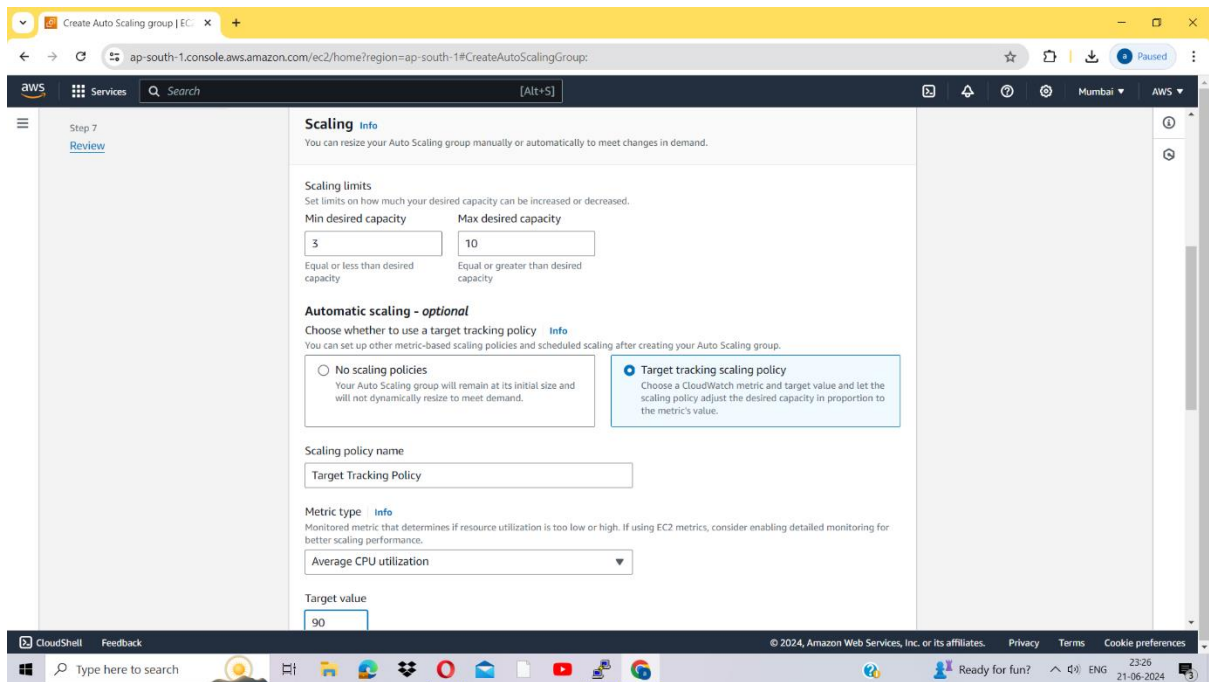

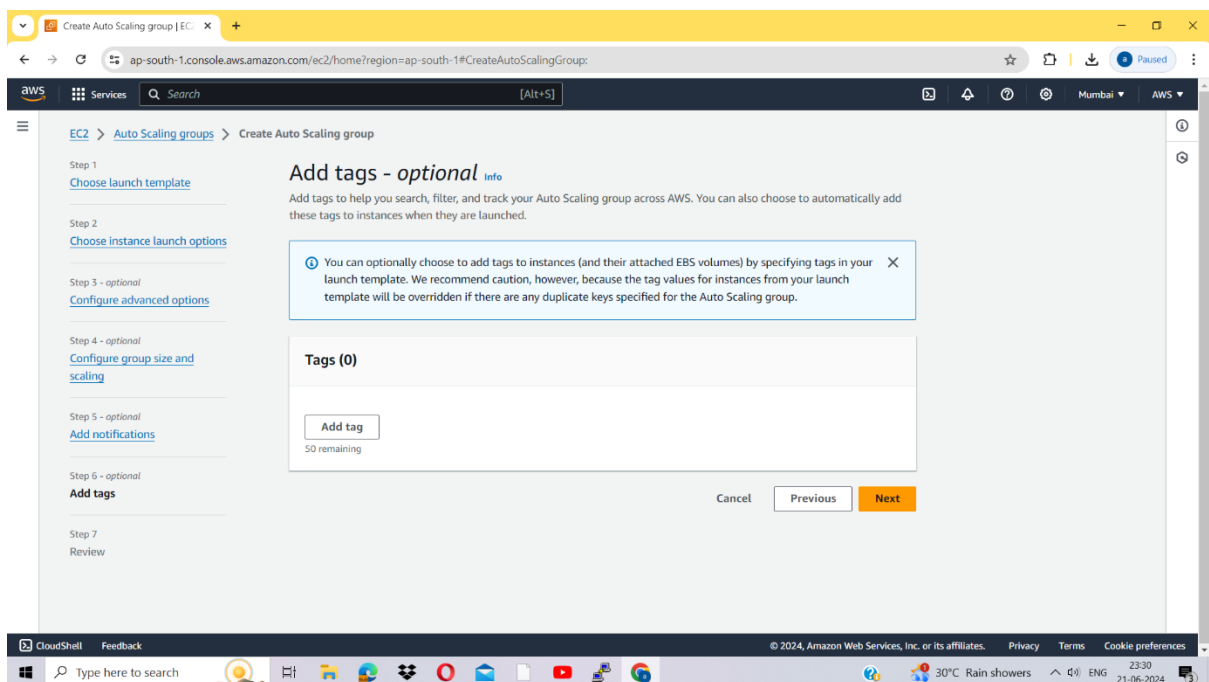

Configure the **Group size** and **Scaling** policies.

Select as per your requirement:

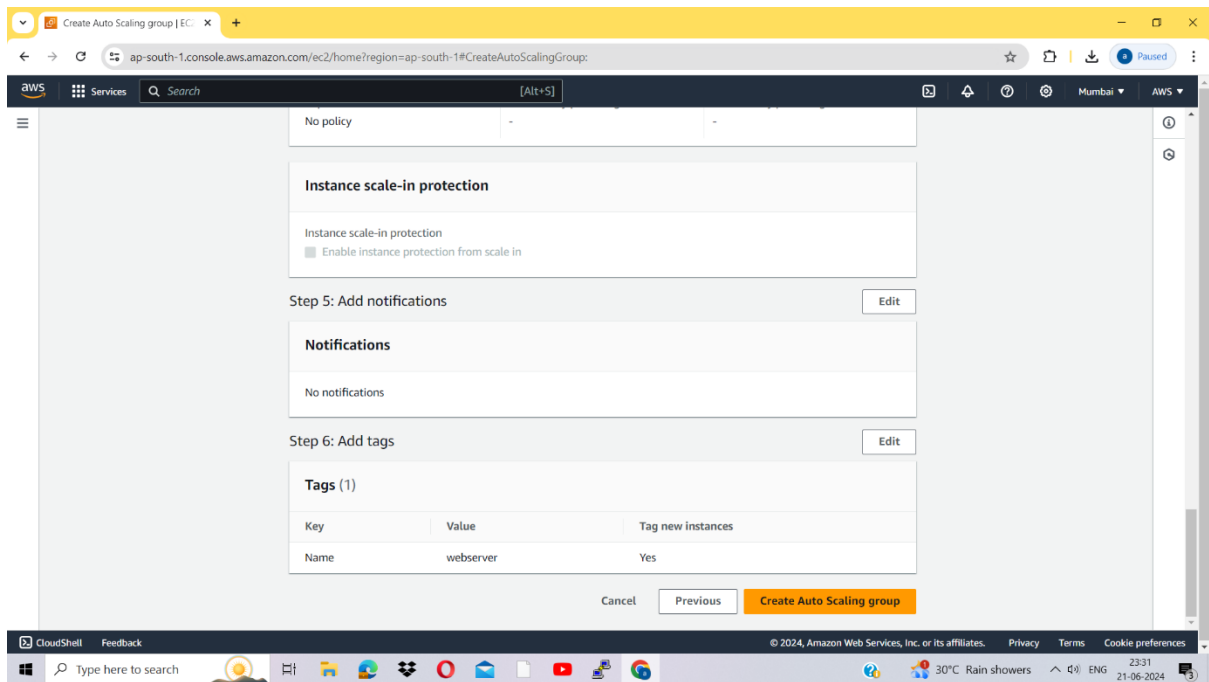

- Desired: 3
- Minimum: 3
- Maximum: 10

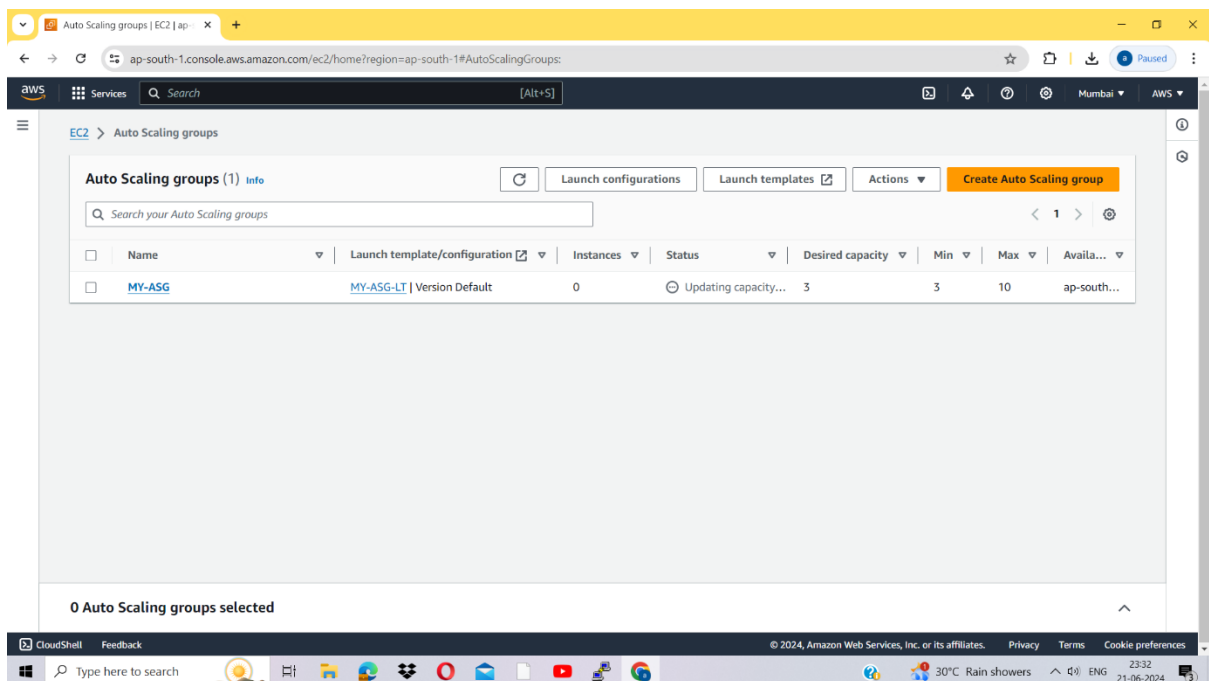

- Select the **Target tracking scaling policy**.

- Click on the **Create Auto Scaling Group**

- Now you can see the **Auto Scaling is creating** and it is also creating the desired state of the EC2 Instance

- We selected the **Desired state equal to 3** and you can see the **3 Instance is Running**

Settings

This Classic Load Balancer can be migrated to a next generation load balancer. Migration wizard uses your load balancer's current configurations to create a new load balancer. [Learn more.](#)

Launch migration wizard

Distribution of targets by Availability Zone (AZ)

For each enabled Availability Zone, you can view the number of registered instances and their current health states. Selecting any values here will apply the corresponding filter to the Target instances table.
